

1. What is the IP address and TCP port number used by the client computer (source) that is transferring the file to gaia.cs.umass.edu? To answer this question, it's probably easiest to select an HTTP message and explore the details of the TCP packet used to carry this HTTP message, using the "details of the selected packet header window" (refer to Figure 2 in the "Getting Started with Wireshark" Lab if you're uncertain about the Wireshark windows).

```
Protocol: TCP (6)
Header checksum: 0xa518 [validation
[Header checksum status: Unverified]
Source: 192.168.1.102
Destination: 128.119.245.12
Transmission Control Protocol, Src Port
Source Port: 1161
Destination Port: 80
[Stream index: 0]
```

My Ip : 192.168.0.102
Port : 1161

2. What is the IP address of gaia.cs.umass.edu? On what port number is it sending and receiving TCP segments for this connection?

Ip : 128.119.245.12
Port : 80

3. What is the IP address and TCP port number used by your client computer (source) to transfer the file to gaia.cs.umass.edu?

```
► Flags: 0x4000, Don't fragment
Time to live: 64

```

Ip : 192.168.0.4
Port : 51848

4. What is the sequence number of the TCP SYN segment that is used to initiate the TCP connection between the client computer and gaia.cs.umass.edu? What is it in the segment that identifies the segment as a SYN segment?

```
▼ Transmission Control Protocol, Src Port: 1161, Dst Port: 80
  Source Port: 1161
  Destination Port: 80

```

-> 세그먼트 헤더의 flags 필드에서 Syn비트가 set되어 있다.

5. What is the sequence number of the SYNACK segment sent by gaia.cs.umass.edu to the client computer in reply to the SYN? What is the value of the Acknowledgement field in the SYNACK segment? How did gaia.cs.umass.edu determine that value? What is it in the segment that identifies the segment as a SYNACK segment?

-> number of the SYNACK segment : 0이다.

-> 위 사진에서 Syn과 Acknowledgment 비트가 모두 Set되어 있는데, 이것이 SYNACK 세그먼트임을 알려준다.

6. What is the sequence number of the TCP segment containing the HTTP POST command? Note that in order to find the POST command, you'll need to dig into the packet content field at the bottom of the Wireshark window, looking for a segment with a "POST" within its DATA field.

```

7. Consider the TCP segment containing the HTTP POST as the first segment in the TCP connection. What are the sequence numbers of the first six segments in the TCP connection (including the segment containing the HTTP POST)?

At what time was each segment sent? When was the ACK for each segment received?

-> 1(0.026477 -> 0.053937), 566(0.041737 -> 0.077293), 2026(0.054026 -> 0.124585),

Given the difference between when each TCP segment was sent, and when its acknowledgement was received, what is the RTT value for each of the six segments?

1. 0.02746
2. 0.035556
3. 0.070559
4. 0.114428
5. 0.139894
6. 0.189645

What is the `EstimatedRTT` value (see Section 3.5.3, page 242 in text) after the receipt of each ACK?

1. 0.02746
2. 0.028472
3. 0.033732
4. 0.043819
5. 0.055828
6. 0.069763

Assume that the value of the `EstimatedRTT` is equal to the measured RTT for the first segment, and then is computed using the `EstimatedRTT` equation on page 242 for all subsequent segments.

Note: Wireshark has a nice feature that allows you to plot the RTT for each of the TCP segments sent.

Select a TCP segment in the “listing of captured packets” window that is being sent from the client to the `gaia.cs.umass.edu` server. Then select: *Statistics->TCP Stream Graph- >Round Trip Time Graph*.

10. Are there any retransmitted segments in the trace file? What did you check for (in the trace) in order to answer this question?

-> 재전송되었다는 것은 윈도우의 크기가 줄어들었다는 것을 의미한다. 윈도우가 감소한 위치가 재전송된 곳이라고 볼 수 있다. 다음 표를 보면, 타임아웃에 의해 재전송된 구간을 확인할 수 있다.

12. What is the throughput (bytes transferred per unit time) for the TCP connection?
Explain how you calculated this value.

13. Use the *Time-Sequence-Graph(Stevens)* plotting tool to view the sequence number versus time plot of segments being sent from the client to the gaia.cs.umass.edu server. Can you identify where TCP's slowstart phase begins and ends, and where congestion avoidance takes over?
